Professional Summary

Computer Science graduate skilled in Python, SQL, Data Science, Machine Learning, NLP, and Generative AI, with hands-on internship experience in AI and Data Science.Experienced in data preprocessing, EDA, feature engineering, statistical analysis, and model development using Scikit-learn.Built AI/ML projects using LLMs, RAG, Transformers, NLP, and Flask, seeking entry-level opportunities in Data Science, ML, or AI Engineering.

Technical Skills

- **Programming:** Python, SQL
- **Data Science:** Pandas, NumPy, EDA, Statistics
- **Machine Learning:** Scikit-learn, Regression,Classification, Clustering,Feature Engineering,Model Evaluation
- **AI & NLP:** Generative AI, LLMs, Prompt Engineering, NLP, RAG, AI Chatbot Development
- **Deep Learning:** TensorFlow, PyTorch, CNN
- **Databases:** MySQL WorkBench, SQL
- **Visualization:** Power BI, Matplotlib, Seaborn
- **Deployment & Tools:** Flask, Render, Railway, Aiven, Git, GitHub, Jupyter Notebook, Google Colab

Professional Experience

BDreamz Global Solutions Chennai, India

Data Science & AI Intern Apr 2025 – Aug 2025

- Developed end-to-end data preprocessing pipelines using Python, Pandas, NumPy, and SQL to clean, transform, validate, and prepare structured datasets for AI/ML model development and analysis.
- Performed EDA, statistical analysis, feature engineering, and data visualization to identify patterns, generate actionable insights, handle data quality issues, and improve predictive model readiness.
- Trained,validated,and evaluated Scikit-learn regression and classification models using standard performance metrics,while applying NLP concepts and exploring LLM and RAG techniques for AI applications.

Projects

AI-Powered RAG Chatbot | *Python, Flask, React, Gemini API, RAG, Git, Render*

- AI-powered chatbot using React, Flask, and Google Gemini LLM for real-time conversational responses.
- Built REST APIs with Flask and securely managed API credentials using environment variables.
- Deployed the application using Render and maintained the source code using Git and GitHub.

Employee Salary Growth Prediction | *Python,Pandas,NumPy,Scikit-learn, Matplotlib,Model Evolutions*

- Built a Random Forest model to predict employee salary growth using Python and Scikit-learn.
- Preprocessed data using `OneHotEncoder`, and `train_test_split`.
- Built and evaluated regression models using MAE, MSE, RMSE, and R^2 metrics score of **85%** on the test set.

AI Text Summarization System | *Python, NLP, Deep Learning, Transformers, PyTorch, Flask*

- Developed an AI text summarization system using NLP,BART Transformers to generate concise summaries.
- Implemented NLP preprocessing, tokenization, Transformer summarization, and ROUGE evaluation.
- Built a Flask web application for generating automated text summaries.

Education

Aditya Degree College *Jun 2023 – May 2026*

Computer Science — B.Sc. CGPA: 8.0 / 10.0

Certifications

- Python Essentials — Cisco Networking Academy
- Intro to Machine Learning — Kaggle Learn
- Generative AI Learning Path — Google Cloud Skills Boost
